Energy efficiency and sustainability shape VGP’s attendance at Transport Logistic Fair in Munich

- **Start of construction of the largest rooftop photovoltaic system in Germany on one single building**
- **The VGP Park Magdeburg-Sülzetal will generate almost 30 MWp of electricity by the end of this year**
- **Energy efficiency and sustainability are main topics for VGP at Transport Logistic Fair**

Duesseldorf, 08 May 2023 - VGP NV ("VGP" or "the Company"), a European owner, operator and developer of high-quality logistics and commercial real estate, announces as part of its presence at the Transport Logistic trade fair in Munich that installation of the largest rooftop photovoltaic system on one single building in Germany has started at the fully leased VGP Park Magdeburg-Sülzetal**.**

With its 108.000 m² of roof space, the construction phase of this rooftop photovoltaic system already started in March. The biggest installation on the roof of one building is to generate 10.26 MWp .Therefore, the biggest on-roof installation on one building in Germany is about to be launched. The planned completion of the entire area is scheduled for June. By the end of this year, the entire electricity, generated in the whole Park will add up to nearly 30 MWp.

The park's location close to the city of Magdeburg and its proximity to important state and federal crossings make it extremely attractive. In addition to its high building standards, the approximately 300,000 m² park offers easy access to the city centres of Halle and Leipzig as well as a complete technical infrastructure directly on the site. VGP Park Magdeburg-Sülzetal is striving for certification according to the DGNB Gold Standard.

In addition to VGP's commitment to energy efficiency, VGP focuses on efficient relationships with its suppliers to minimise its environmental footprint by adopting sustainable building materials and methods. The company has a particular focus on improving the carbon footprint of its supply chain.

Christopher Zuell, Head of Innovation and Sustainable Construction at VGP, explains: *"As a family business, VGP is constantly thinking outside the box. It is important to us to contribute to a more sustainable world and to contribute to climate goals with our business model. By integrating our suppliers and business partners into our sustainability concept, we at VGP are creating a holistic approach."*

At the Transport Logistic trade fair, which takes place from 9 to 12 May in Munich, VGP can be found at **stand B5.218** to talk about sustainable development in the logistics real estate industry and report on the company's current developments.

The VGP Group has 39 locations in Germany and is active in seventeen European countries. In total, the family-owned company based in Antwerp, Belgium, operates 109 parks in Europe.

In addition to state-of-the-art technology, sustainability and energy efficiency are central parameters for the commercial properties developed by VGP. The company has set itself the goal of becoming carbon neutral by 2025 for scope 1 and 2 and is also committed to BREEAM/DGNB certifications and green power generation. As a result, 61.2 % of the portfolio is already certified and the green power generation capacity of VGP's renewable energy division has been increased to 131.6 MWp, with a further 72.7 MWp in the pipeline. The VGP Foundation, established in 2019, has already identified 36 projects that address social concerns, nature conservation and the protection of cultural assets, and has received €6.6 million in funding from VGP to date.
